## **Weekly Team Log - WEEK 3**

### **Week of May 12 to May 18**

1. Presentation of project to prof and TA's.
2. Working on web scraping.
3. Everyone installing and learning qGIS.
4. Splitting tasks for everyone to focus on for rest of the week, and next week.
5. KT and Ngan finished the data scraping and merging of the datasets.
6. Sofia working on QGIS and layering the ODB and PHU layers. So far it looks that there are not overlapping blocks. Further methods are required to validate this. Need to do more research about how to do this. Or ask Bruno on wednesday.
7. KT manually went through the addresses, flagged problematic entries, sent discrepancies to Marian.
8. Sofia finished the QGIS visualizations, all data which were required have been integrated into the map! Bruno gave help on optimizing the QGIS.
9. Research about statistical methods which could be useful for this week. Mostly reading up from previous courses 572 nad 573.
